Contents

Series Foreword	vii
Sources	ix
Introduction	xi
I Receptive Fields	1
1 Analysis of Linsker's Simulations of Hebbian Rules <i>David J. C. MacKay and Kenneth D. Miller</i>	3
2 Toward a Theory of the Striate Cortex <i>Zhaoping Li and Joseph J. Atick</i>	19
3 Bayesian Self-Organization Driven by Prior Probability Distributions <i>Alan L. Yuille, Stelios M. Smirnakis, and Lei Xu</i>	39
II Models of Topographic Maps in the Brain	53
4 Dynamics and Formation of Self-Organizing Maps <i>Jun Zhang</i>	55
5 A Unifying Objective Function for Topographic Mappings <i>Geoffrey J. Goodhill and Terrence J. Sejnowski</i>	69
6 Constrained Optimization for Neural Map Formation: A Unifying Framework for Weight Growth and Normalization <i>Laurenz Wiskott and Terrence J. Sejnowski</i>	83
7 How to Generate Ordered Maps by Maximizing the Mutual Information between Input and Output Signals <i>Ralph Linsker</i>	129
III Models of Cortical Feature Maps	139
8 Models of Orientation and Ocular Dominance Columns in the Visual Cortex: A Critical Comparison <i>E. Erwin, K. Obermayer, and K. Schulten</i>	141
9 Development of Oriented Ocular Dominance Bands as a Consequence of Areal Geometry <i>H.-U. Bauer</i>	185
10 The Joint Development of Orientation and Ocular Dominance: Role of Constraints <i>Christian Piepenbrock, Helge Ritter, and Klaus Obermayer</i>	201
11 A Self-Organizing Model of "Color Blob" Formation <i>H. G. Barrow, H. J. Bray, and J. M. L. Budd</i>	213
12 A Type of Duality between Self-Organizing Maps and Minimal Wiring <i>Graeme Mitchison</i>	235

IV Self-Organizing Maps for Unsupervised Data Analysis	247
13 A Bayesian Analysis of Self-Organizing Maps <i>Stephen P. Luttrell</i>	249
14 Hyperparameter Selection for Self-Organizing Maps <i>Akio Utsugi</i>	277
15 GTM: The Generative Topographic Mapping <i>Christopher M. Bishop, Markus Svensen, and Christopher K. I. Williams</i>	291
16 Self-Organization as an Iterative Kernel Smoothing Process <i>Filip Mulier and Vladimir Cherkassky</i>	311
V Extensions of Self-Organizing Maps	325
17 A Stochastic Self-Organizing Map for Proximity Data <i>Thore Graepel and Klaus Obermayer</i>	327
18 Self-Organized Formation of Various Invariant-Feature Filters in the Adaptive-Subspace SOM <i>Teuvo Kohonen, Samuel Kaski, and Harri Lappalainen</i>	345
19 Faithful Representation of Separable Distributions <i>Juan Lin, David G. Grier, and Jack D. Cowan</i>	369
20 Dynamic Cell Structure Learns Perfectly Topology Preserving Map <i>Jörg Bruske and Gerald Sommer</i>	385
21 An Analysis of the Elastic Net Approach to the Traveling Salesman Problem <i>Richard Durbin, Richard Szeliski, and Alan Yuille</i>	407
22 Sorting with Self-Organizing Maps <i>Marco Budinich</i>	419
Index	423

Self-Organizing Map Formation

Foundations of Neural Computation

edited by Klaus Obermayer and Terrence J. Sejnowski

This book provides an overview of self-organizing map formation, including recent developments. Self-organizing maps form a branch of unsupervised learning, which is the study of what can be determined about the statistical properties of input data without explicit feedback from a teacher. The articles are drawn from the journal *Neural Computation*.

The book consists of five sections. The first section looks at attempts to model the organization of cortical maps and at the theory and applications of the related artificial neural network algorithms. The second section analyzes topographic maps and their formation via objective functions. The third section discusses cortical maps of stimulus features. The fourth section discusses self-organizing maps for unsupervised data analysis. The fifth section discusses extensions of self-organizing maps, including two surprising applications of mapping algorithms to standard computer science problems: combinatorial optimization and sorting.

Klaus Obermayer is Professor of Computer Science and head of the Neural Information Processing Group at the Technical University of Berlin.

Terrence J. Sejnowski is Head of the Department of Computational Neurobiology at the Salk Institute of Biological Studies and Professor of Biology at the University of California, San Diego. He is the coeditor of *Unsupervised Learning and Map Formation* (MIT Press, 1999) and of *Neural Codes and Distributed Representation* (MIT Press, 1999) and the Editor-in-Chief of the journal *Neural Computation*.
